

Scenario:

Matt Tucker brings in a prescription for a niacin suspension. As the pharmacist, you know it's in the patient's best interest to consult with him about the cost since this is a product that you will have to prepare, and about the aspects of drug therapy so Matt knows what to expect. You explain that niacin has been very useful in the management of cholesterol. However there are a significant number of people that cannot tolerate niacin. Therefore you contact Dr. Harper and recommend that Mr. Tucker get half of the prescription filled with one refill .
