Helene Kirkpatrick was released from Piedmont Medical Center today. She had been hospitalized for one month and four days due to a car accident. Her injuries reduced her ability to walk resulting in bedsores. Her mobility has improved well enough for her to go home. Unfortunately, she will need another course of antibiotics to treat the infected ulcerations on her backside and the back of her thighs. Her physician consults with you for recommendation to help clear up her malodorous bedsores. This prescription is your recommendation.
